DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
2. Claims 22, 24 and 28 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dusterhoft (US PgPub 2002/0062161). Dusterhoft teaches an apparatus for a free expansion (see Figs. 2 and 7, and paragraph 47). While Dusterhoft does not specifically teach that an injection parameter of the fluid is controlled according to the instant claim 22, Dusterhoft teaches a controllable pressure apparatus (26). The apparatus taught by Dusterhoft is capable of performing the instantly claimed function which, it should be noted, is a method limitation and does not materially affect the apparatus.

Allowable Subject Matter

3. Claims 1 and 3-21 are allowed.
4. Claims 23, 25-27 and 29-33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not teach or fairly suggest a method or apparatus for thermally conditioning and then free-blowing a preform such that at least one injection parameter of the fluid used in the free-blowing is controlled such that the final internal volume of the container falls within predetermined limits. Close prior art is Dusterhoft, which teaches controlling the temperature of certain areas of the preform, but does not teach controlling injection parameters of the blow air. Absent hindsight, there

is no motivation to modify the teachings of Dusterhoft to control the blow air. Because Dusterhoft is already controlling the temperature of certain areas of the preform, controlling a parameter of the blow air is unnecessary.

Response to Arguments

6. In response to applicant's argument that Dusterhoft does not teach the limitations of instant claims 22, 24 and 28, a recitation of the intended use of the claimed invention must result in a structural difference between the claimed invention and the prior art in order to patentably distinguish the claimed invention from the prior art. If the prior art structure is capable of performing the intended use, then it meets the claim.

Conclusion

7. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the date of this final action.
